It's finally done. Luke is dead. For years, the rebellion has wondered why Luke didn't go with him and, on the Death Star, .The shortage of sub-Saharan physicians: a historical perspective. The recent shortage of sub-Saharan physicians (SSA), which is seen primarily in Rwanda, Burundi, Democratic Republic of Congo, and Uganda, has serious implications for public health. This shortage has resulted, in part, from the withdrawal of major international nongovernmental organizations from the region in the 1990s, combined with a weakening of infrastructure, political instability, and the impact of the Rwandan genocide. Whereas the extent and nature of the SSA physician shortage is not well known, various estimates are cited in the literature. A review of the literature reveals that the shortages are serious, profound, and growing. In 1994, there were roughly 1,000 SSA physicians for approximately 7 million SSA people, whereas in 2004, there were 3,500 SSA physicians for 25.7 million SSA people, an increase

of 1,500 physicians (increase of 1 in 28) for only four years. The 2004 numbers, while alarming, are probably optimistic, because they fail to include the cases of physicians who have left their posts for fear of their lives. In addition, the percentage of cases of physicians working in SSA is small (2% to 6%), and the number of doctors is increasing rapidly. The World Health Organization and other international agencies are aware of the SSA physician shortage, but few details regarding the shortages are known. In response to the shortage, the only two health facilities in the region which used to be mission hospitals, the Bugando Medical Centre in Mwanza, Tanzania, and the Union Hospital of Bukavu, the former largest hospital in the Democratic Republic of Congo, have been expanded to form a network of five hospitals in four countries. The expansion of these hospitals was championed by the Fogarty International Center, and the expansion is thought to be the result of intensive training in Tanzania. The expansion of these hospitals serves as a model for a collaborative model of healthcare in SSA. Although only a few such hospitals have been established, the model is beginning to be replicated. Recent announcements by the Rwandan government of an expansion of the 'one health approach' throughout the country in the coming months may signal a broader campaign to eliminate the shortage. This shortage of physicians, coupled with the persistent under-representation of women in medicine, the health service delivery system in SSA 2d92ce491b
