FictionBook Tools is a package for Windows containing three utilities that enhance the operation of Windows explorer on .FB2 files and files containing FB2 documents: - A FB2 Validator (FBTool.BfBValidator) - A.fb2 Files Editor (FBTool.BfBEditor) - An Infotips and Columns provider for Windows Explorer (FBTool.BfBTips) Besides validating FB2 files, this package provides some extra columns and enhancements to windows explorer that can be useful on any FB2 document. If you use Windows Explorer as your authoring tool, you can use these tools to enhance the productivity of your workflow. The Infotips and Columns provider can be useful to navigate FB2 documents on a desktop PC. The utility package comes with one installer file: FBTool.exe. Simply unzip it into any temporary directory. The Tools and help files (.txt,.html) are placed in a subdirectory of the FB2 folder in the zip archive. A good start is a standalone installation of the core utilities. That means the FB2 validator and file editor can start without the context menu integration. However, to be able to use the Explorer integration, you will also need to install the Explorer Context Menu Provider. This package includes an installer for the context menu integration, which can be used on every Windows version. In addition to the server version (FBTool.exe.sys) the user version (FBTool.exe.user) can be placed anywhere on the machine. The unpacked FBTools\FBTools.bin package (without installer) contains the core FB2 utilities, but won't provide integration with Windows Explorer. It provides (or can) support for document models. The unpacked FB2 Tools\FBTools.bin.exe package contains the FB2 validator and file editor. It allows integration with Windows Explorer. The unpacked FB2 Tools\FBTools.bin.ext.exe package contains the XML Infotips Columns Provider. Unpack the main FBTools.bin package into any temporary directory. With the help of the context menu integration, these files appear on the File menu. On Windows XP you can also
