The German sports car company's new car, announced in November, is only available in a single model year — so even if you buy one, you're only getting one year of the car. But Google's self-driving vehicle, unveiled in November, is an option for every model year of the Toyota Camry, and it's been available for months. The way Google is rolling out Android Auto, though, seems like a relic of the past. While the company has made the feature available to owners of Google Pixel phones and Android Auto-equipped cars, many people have been wondering when Android Auto would become an option for vehicles from other manufacturers, like Nissan and Volvo. Today's news makes that a possibility. When Google released the Android Auto software back in 2016, it was a program that would be restricted to the company's own devices: Nexus phones and a few other custom vehicles. That was something of a drawback for those who wanted to use Android Auto on a non-Nexus smartphone or a non-Android-influenced car — but also for those who have relied on Google's vehicles to get them to their destinations without having to think about how to get there. (That's the whole point of Google's experiment with autonomous cars — no need to think about the route you're taking, just the destination.) If you're a Google Pixel owner, you should download the update to Android Auto right away, because that'll be the only time you can use Android Auto with your phone. Everyone else, though

What's New In AutoCAD?

Sharing your drawings with your team is easier than ever before. Place the right annotations in your drawing to minimize the confusion and increase collaboration. (video: 1:30 min.) AutoCAD now automatically converts the color of text, lines and fills to the current display's color space, so you can always work with color as the color you intended. (video: 1:15 min.) A new, unified user experience: Features that span multiple program versions will be familiar, consistent and simple to use for all users. New features will be able to quickly and easily integrate with the user experience of other programs. (video: 1:27 min.) One- and two-dimensional tools that have one consistent feel and aesthetic: Leading-edge drawing tools have new design elements and behavior, making them even easier to use. (video: 1:19 min.) Features that are designed to help you be more productive when working with vector content: Making it easier to edit and reuse paths: Paths can now have their dimensions automatically set to specific units, such as millimeters, pixels, points or percentages. Auto-set the path's dimension to the unit it is based on, or simply set the unit it is in directly. (video: 1:45 min.) Draw your visualizations faster with path wizards: Find and create the vector paths and shapes you need, quickly and efficiently. The Path | Follow Path command will find shapes, including ellipses, circles and arcs, on the current selection or a drawing area. (video: 1:27 min.) Save and manage templates for reusable visualizations: Save reusable visualizations (shapes, text, 3D solids, layers, objects and annotations) as templates. These are reusable when you use them to make a new drawing from scratch or when you work on a drawing for a while. Create custom visualizations from other data: Text and 3D models can now easily be inserted into drawings and exported. Export and import the text and 3D models to get back the details that you didn't include in the original files. (video: 1:14 min.) Take your content and organization to the next level: Achieve better organization in drawings and libraries with the addition of new categories and improved hierarchy. (video: 1:11 min.)
